

Using a **Belonging** Framework to  
Understand **Gender Disparities** in the  
Physical Sciences, Technology,  
Engineering and Mathematics (**pSTEM**)

Jane G. Stout

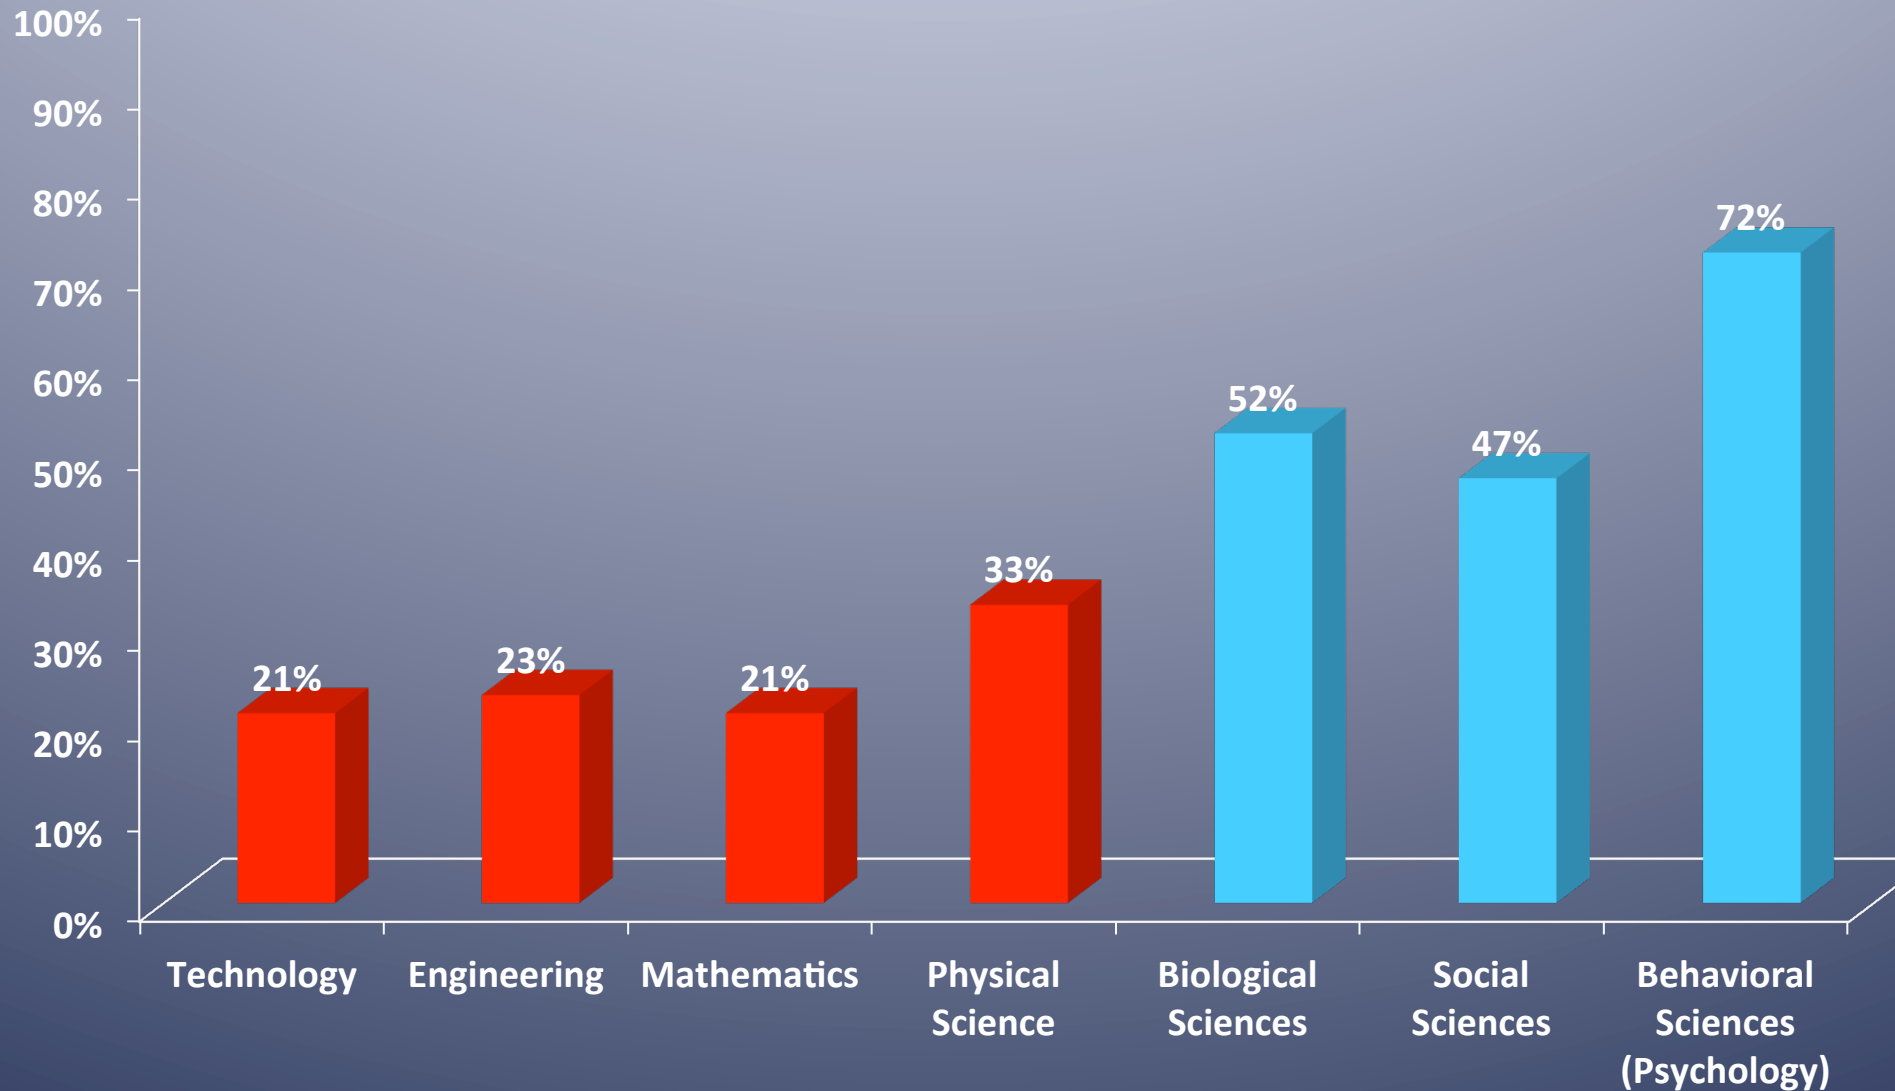

Computing Research Association

Washington, D.C.

# Percent women who earned Bachelors degrees in 2010

# Percent women who earned PhDs in 2010

Need to belong = Core social need

Thwarted need =  
negative consequences

Thwarted need =  
negative **achievement** consequences

# Gender disparities in pSTEM

- Self-efficacy
  - Stout et al., 2011
- Achievement
  - Miyake et al., 2010
- Persistence
  - NSF, 2012

# Should women feel low belonging?

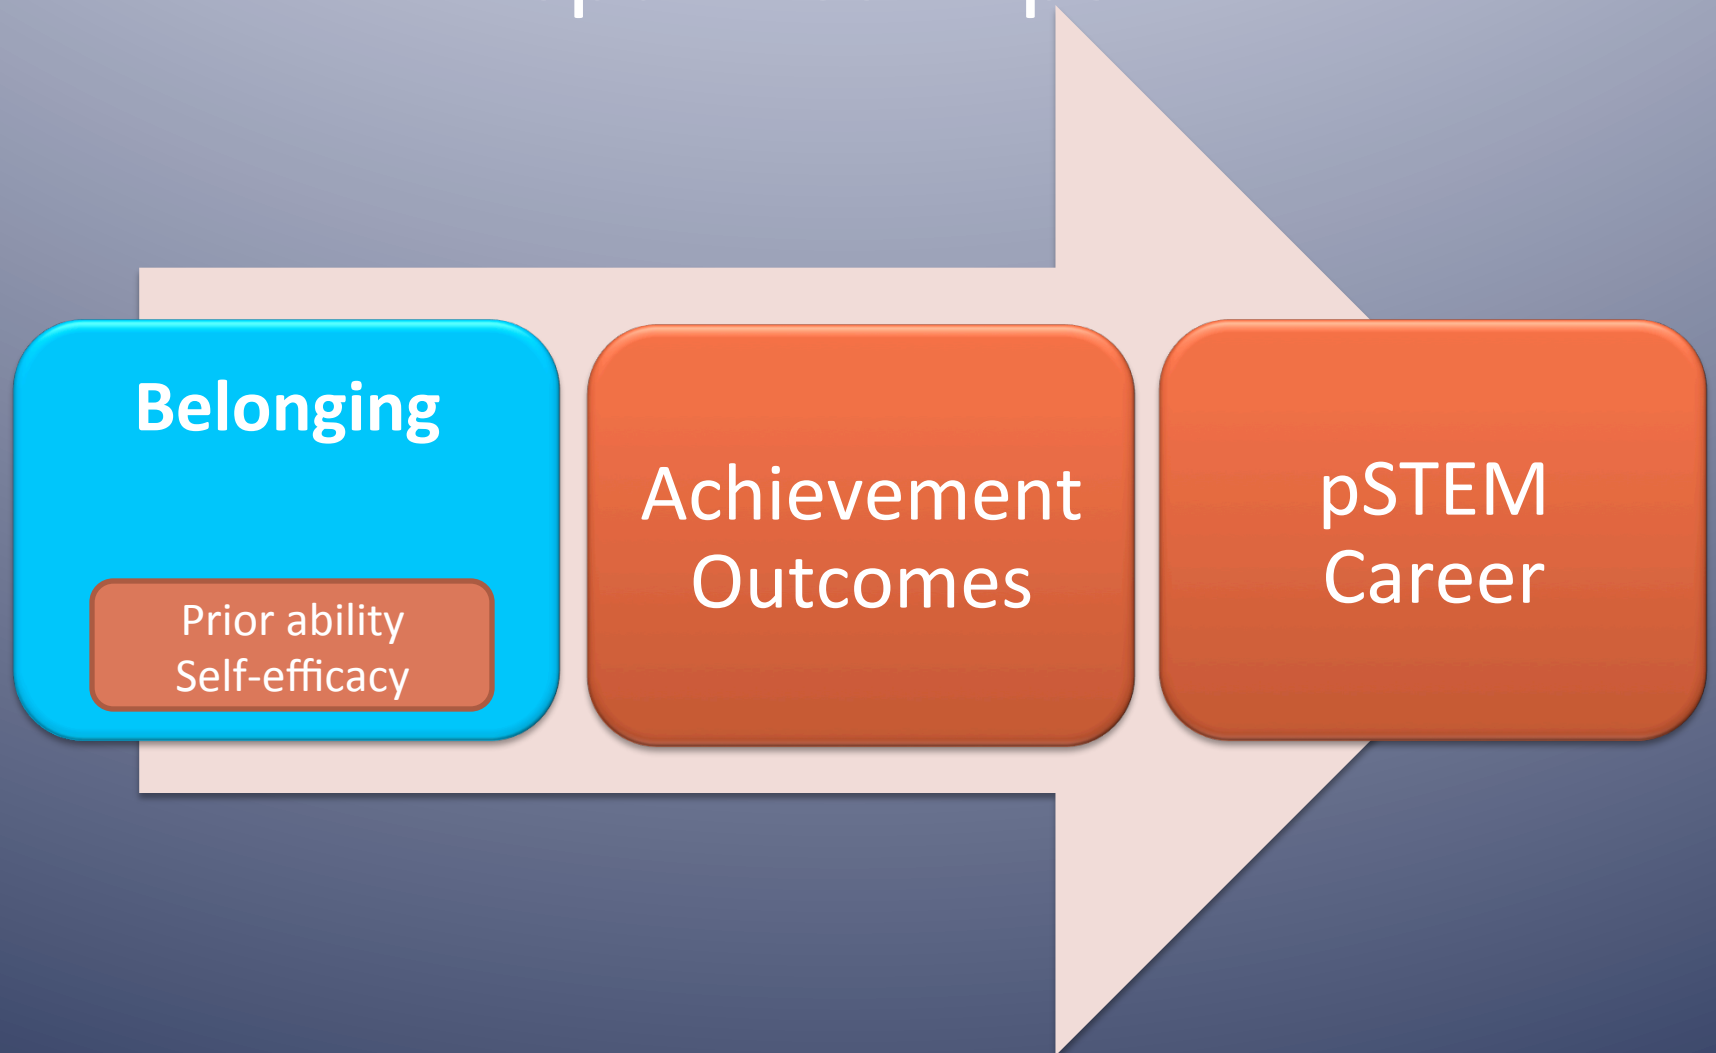

# Theoretical Model of Gender Disparities in pSTEM

Career

# Theoretical Model of Gender Disparities in pSTEM

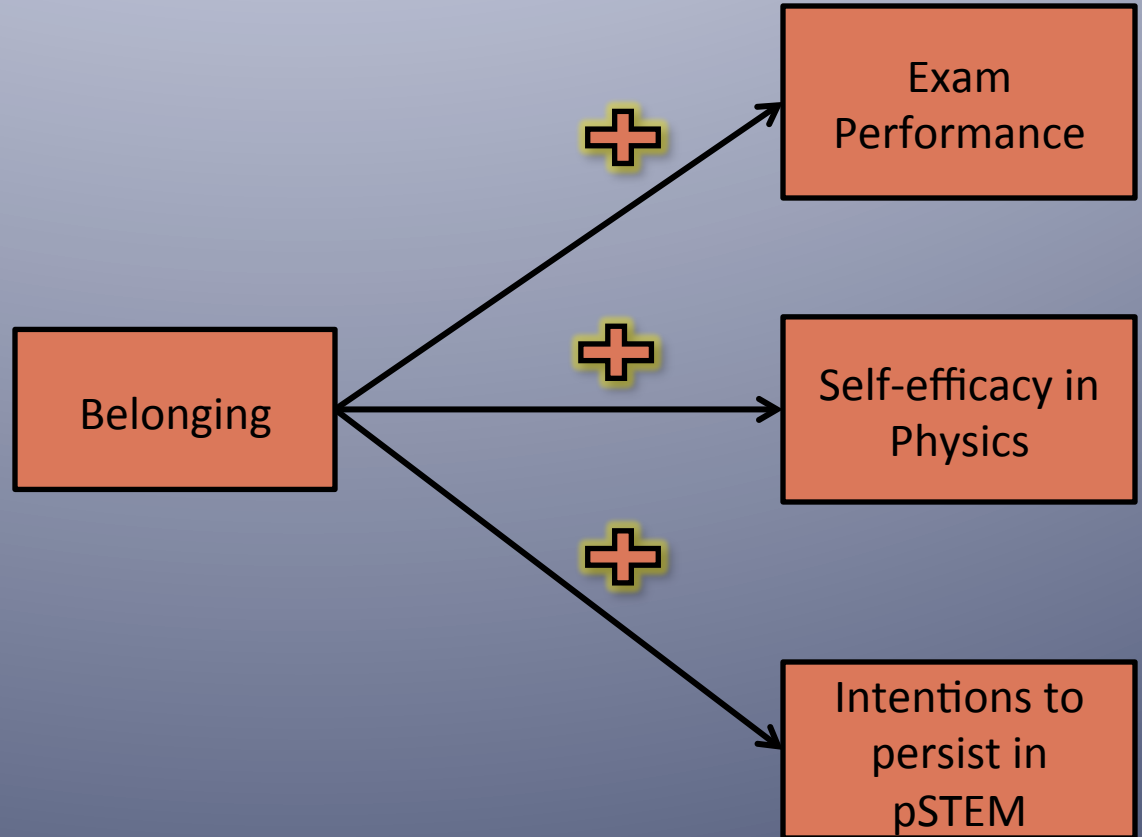

# Field study

- Participants
  - Intro Physics students
    - Women = 95; Men = 193
- Predictors (beginning of the semester)
  - Sense of belonging
  - Self-efficacy
  - Prior ability
- Outcomes (end of the semester)
  - Exam scores
  - Self-efficacy in future Physics
  - Intentions to persist in pSTEM

Beginning of Semester

End of Semester

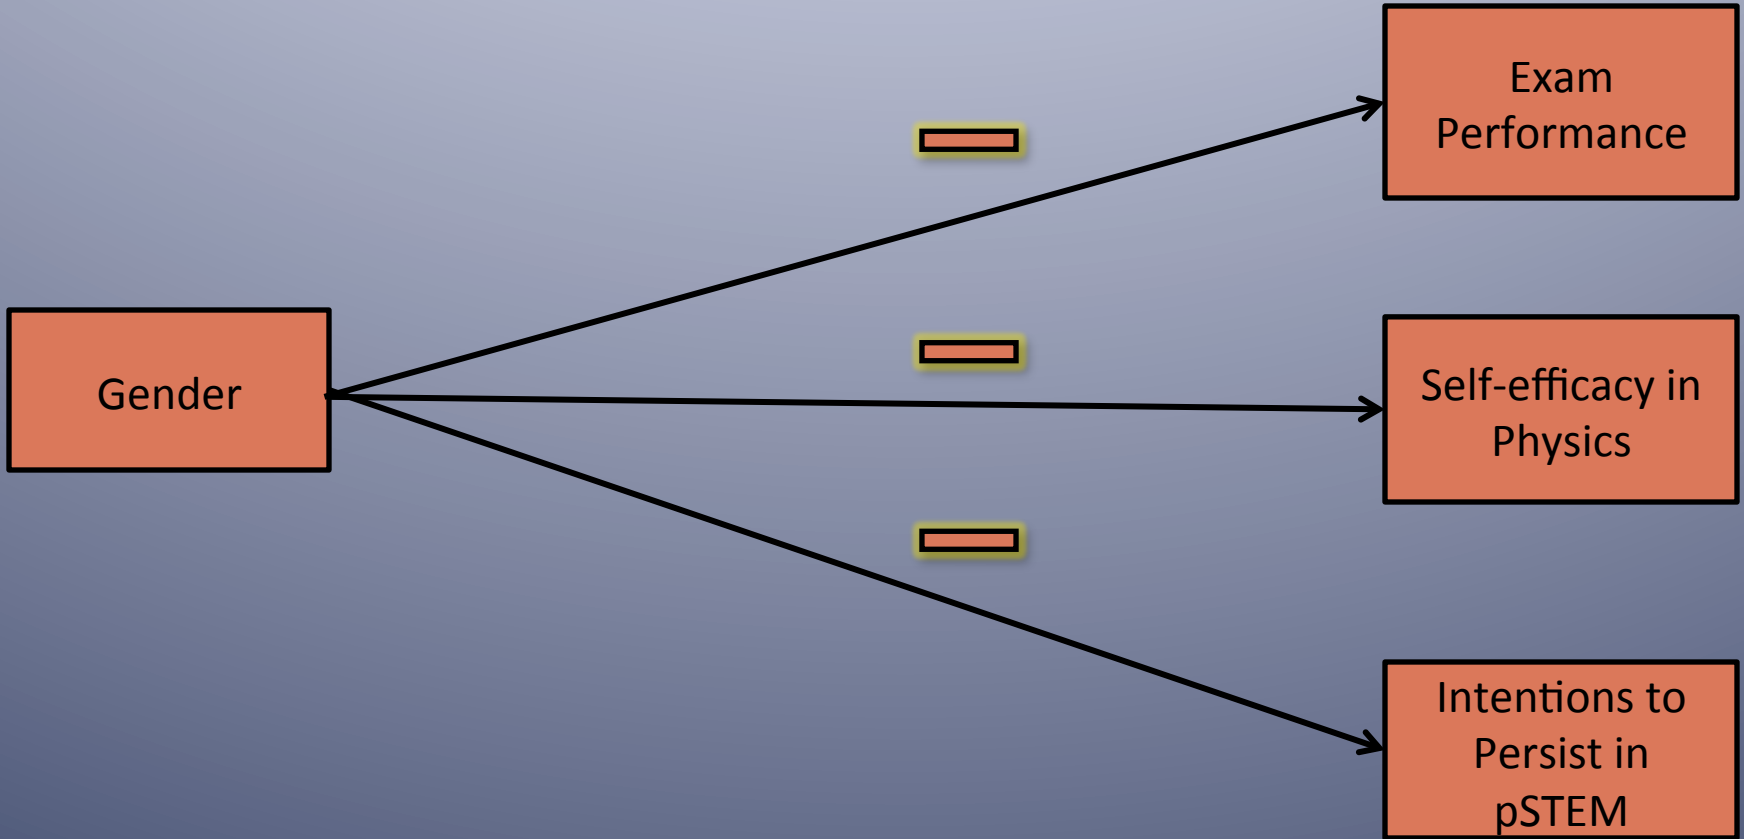

## Beginning of Semester

Women < Men

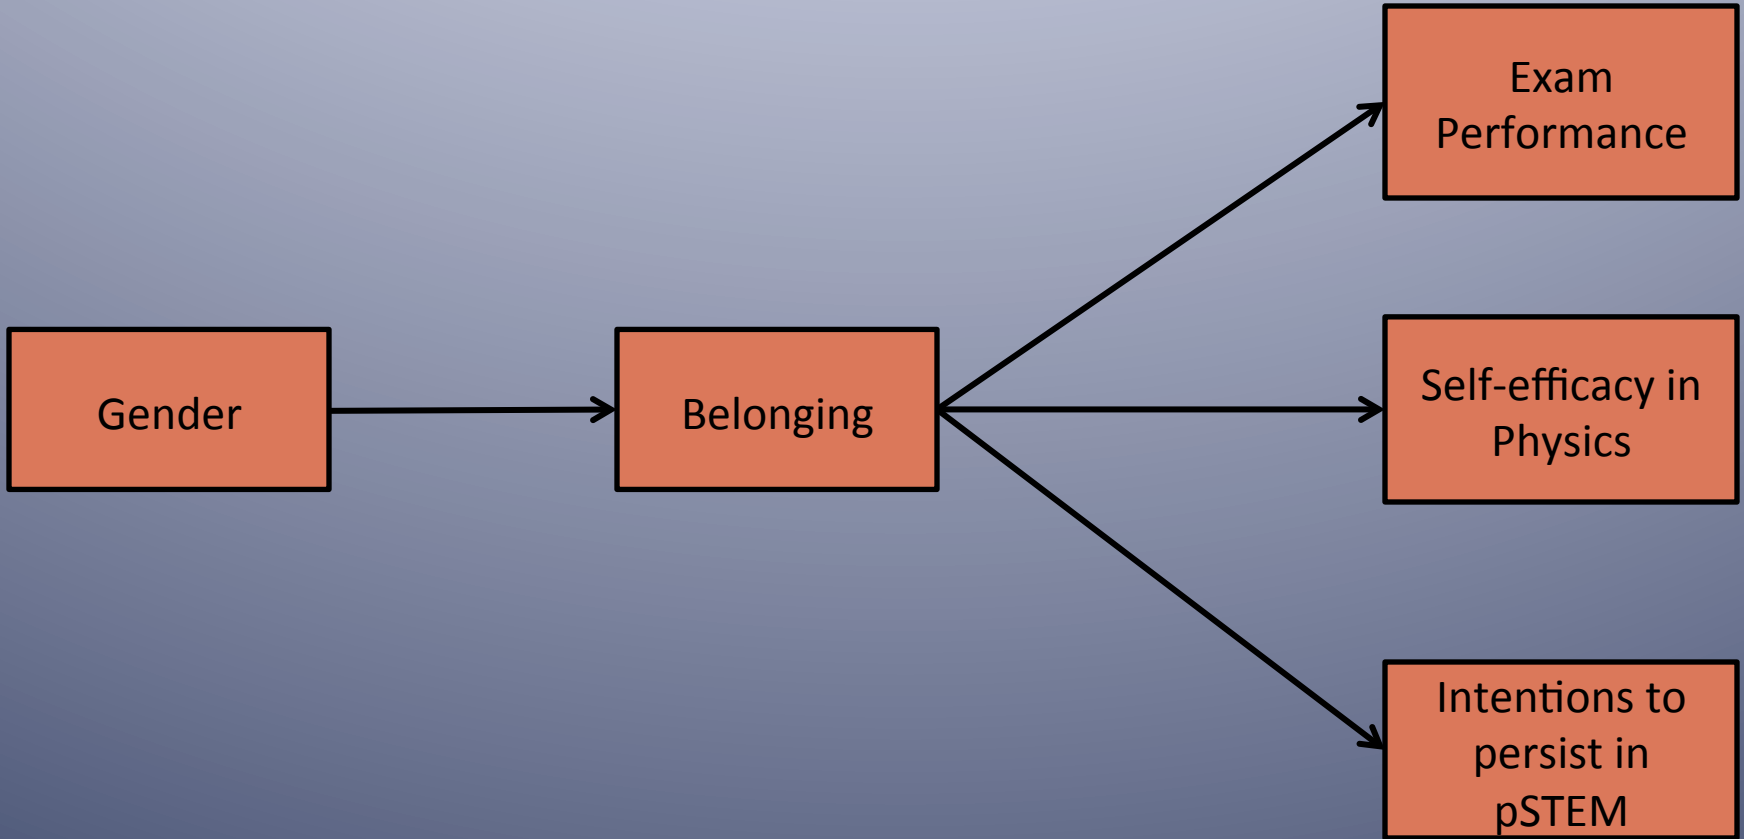

End of Semester

 Women < Men

**Beginning of Semester**

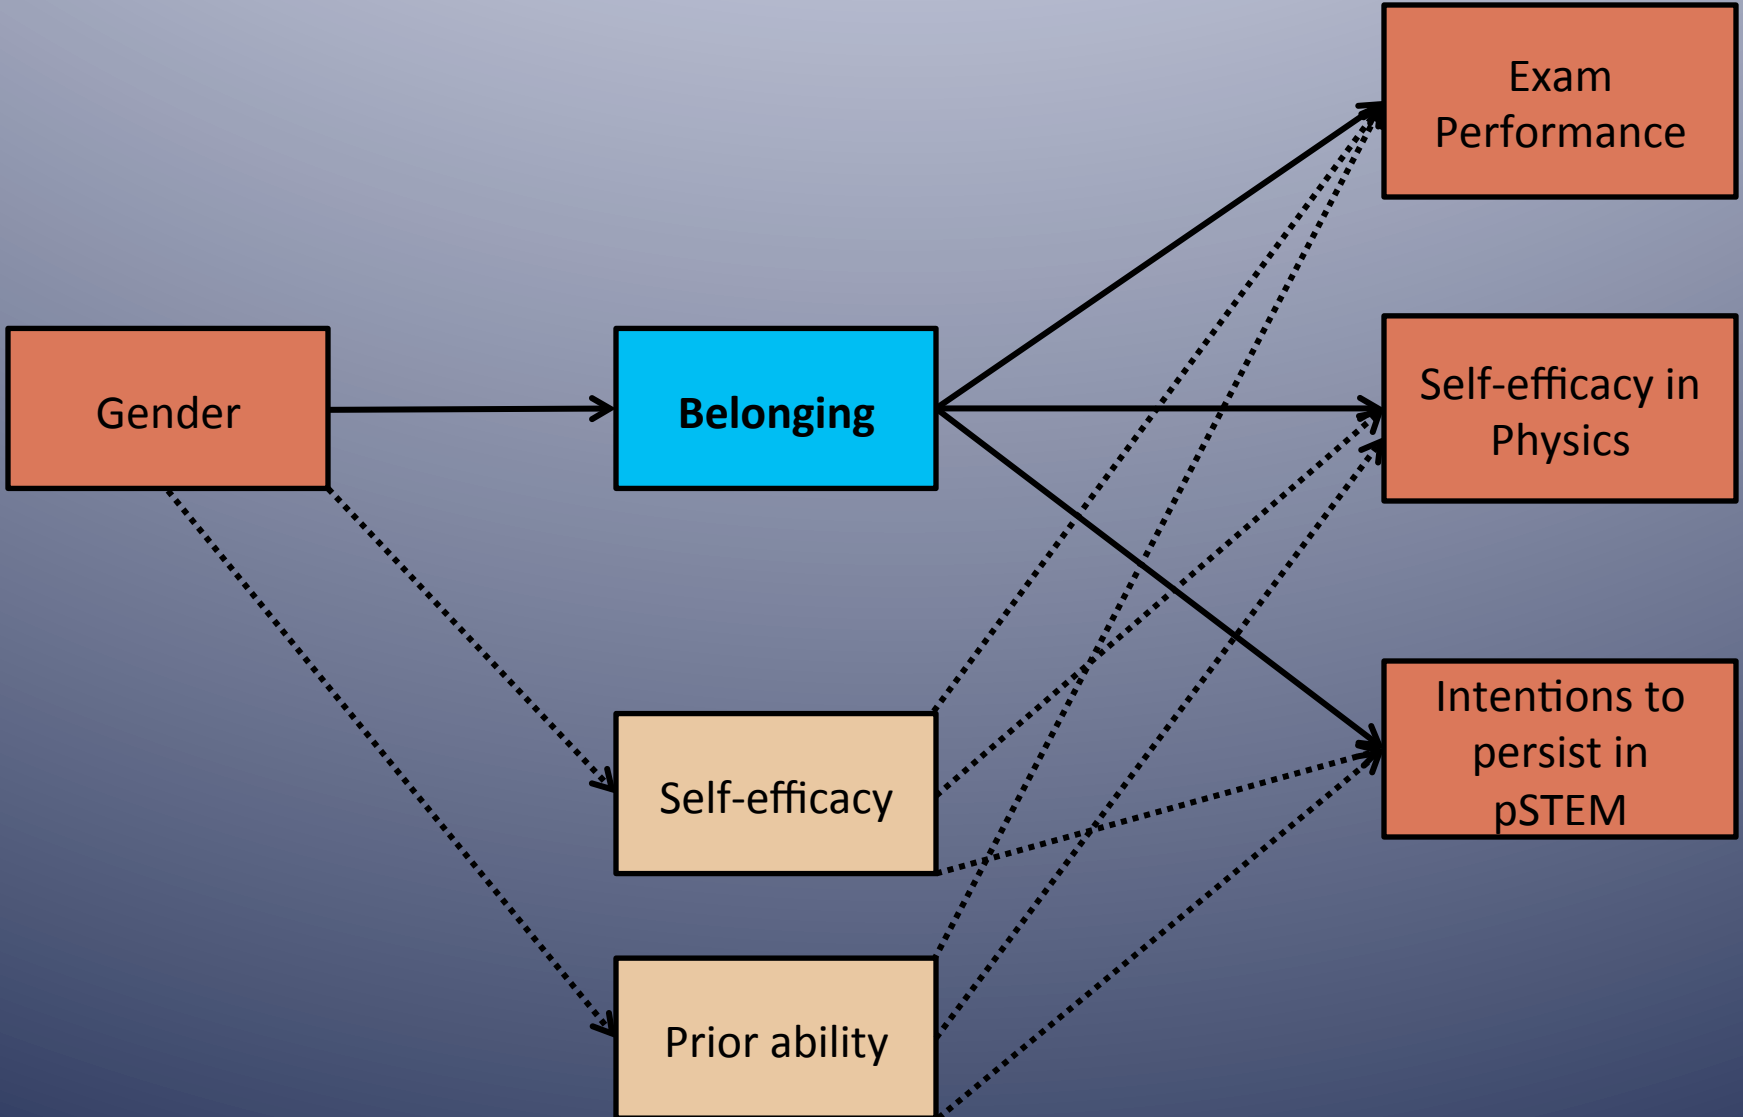

**End of Semester**

**Beginning of Semester**

**End of Semester**

# Summary and Implications

- Belonging is critical to achievement
- Gender disparities in belonging predict gender disparities in achievement
- Endeavor to enhance women's sense of belonging in pSTEM
  - Women role models
  - Inclusive and gender-neutral pSTEM environments
